KEURIG CRASHES

- Keurig Green Mountain shares crashed 26% in after-hours trading Wednesday after the company reduced its forecast for sales and announced plans for layoffs.
- In third-quarter earnings results, the maker of coffee brewers said it now expects a percentage fall in sales in the low- to mid-single digits this year.
- During the quarter, adjusted earnings per share came in at $0.80, versus the forecast for $0.78 according to Bloomberg. Sales missed forecasts, at $969.5 million, versus $1.04 billion forecast.
- The company also announced that it plans to reduce its workforce by 5%.
- CEO Brian Kelley said in the statement, "While we are not pleased with our revenue growth, we delivered earnings at the high end of our previous guidance."
- The company's newest machine, called the Keurig 2.0, failed to take off as expected. During the quarter, brewer and accessory net sales fell 26% compared to the prior year.

Relatively high frequency of ‘CRASHES’ in -10% to -40% range
Crashes are Costly to Active Managers

- Lower portfolio returns
- Higher portfolio return volatility
- Reputational effects for portfolio manager
Objective on an Investment Process

• Identify the common causes of stock price crashes

• Build a model to help anticipate and avoid stock price crashes

• Document the gains to investment performance from positioning a portfolio to avoid stock price crashes
Defining Stock Price Crashes

• “An unusually large and abrupt drop in the price of a stock”

• Measures of whether a stock’s price has crashed during any 6 month period:

  ➢ minimum daily excess return of less than 20% (MINRET)

  ➢ minimum daily excess return more than 8 standard deviations from zero (CRASH)

  ➢ negative coefficient of skewness greater than 2 (NCSKEW)

Indicators of Stock Price Crashes

- Abnormally high stock volume
- High valuation ratios (e.g., market-to-book ratio)
- High level of ‘accounting opacity’ (earnings based on management estimates versus realized cash flows)
- High short interest
- High sell-side forecasts of sales growth
Identifying High Crash Risk Stocks

- Rank stocks on each of the five measures identified in the previous slide
- Assign a ‘crash flag’ to stocks in the highest quintile (top 20%) on each measure
- Stocks with three or more flags are categorized as having high crash risk
- The remainder are classified as having low crash risk

Material discussed is meant for general illustration and/or informational purposes only and should not be construed as tax, legal or investment advice. Any discussion of specific securities should not be considered a recommendation to buy or sell those securities.
Abnormally High Level of Volume

Could signal:
• Insiders and sophisticated investors selling
• Shakey investor base willing to liquidate on bad news
• High level of disagreement among investors -- uncertainty

Measured as the monthly shares traded as a % of Shares Outstanding; and averaging the prior 6 months, minus the average of the 12 months prior (18 months of trading history)
High valuation ratios (e.g., market-to-book ratio)

Could signal:
- Very high expectations
- Potential for large re-rating (decrease in valuations)

Measure as Book to Market values. (Inverse of P/B)
High level of ‘accounting opacity’ (earnings based on management estimates versus realized cash flows)

Could signal:
• Use of aggressive accounting estimates

Measure as Net Income - Free Cash Flow as a % of Total Assets
High Level of Short Interest

Could signal:
• Sophisticated Investors have reason to take a bearish position, their research may be correct

Measure as Short Interest as a % of Shares Outstanding
High Sales Growth as estimated by Sell-Side Analysts

Could signal:
- High expectations that, if not met, could cause a stock correction

Measure as 2 year forward mean Sales estimate / 1 year forward mean Sales estimate

Conclusions and Implications

- Stock returns are characterized by relatively high frequency of large negative returns or ‘crashes’

- These crashes most frequently occur in response to accumulated bad news that is released in quarterly earnings announcement

- We identify 5 flags that are useful for forecasting crashes

- Each flag has an intuitive interpretation that provides the starting point for deeper fundamental analysis
